ConstruCAM-3D: **Demo Version and Full Version / guidance**

Dear customer,

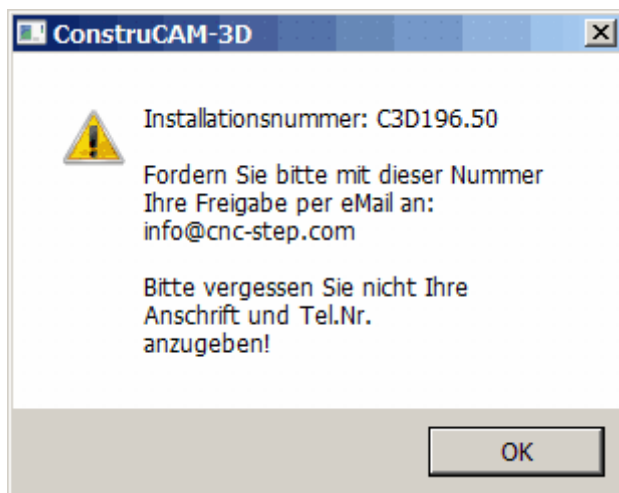

After you have unpacked the available RAR file „ConstruCAM-3D Demo“ (see www.cnc-step.com – download menu / service) into a newly created file (name e.g. ConstruCAM) you can copy a shortcut for the installation file ConstruCAM-3D.exe on your desktop and subsequently start the program from this location.

Whereas all 18 available export filters are exclusively part of the full version, please note, that when using the DEMO version an export data-exchange with the „Direct-Mill“ Button is only possible, if the software WIN PCNC is installed on your computer.

The Economy Version by G-Codes is necessary, because it is the only one that can read G-Codes. When using WIN PCNC Light version only HPGL files can be sent to WIN PCNC for milling and engraving.

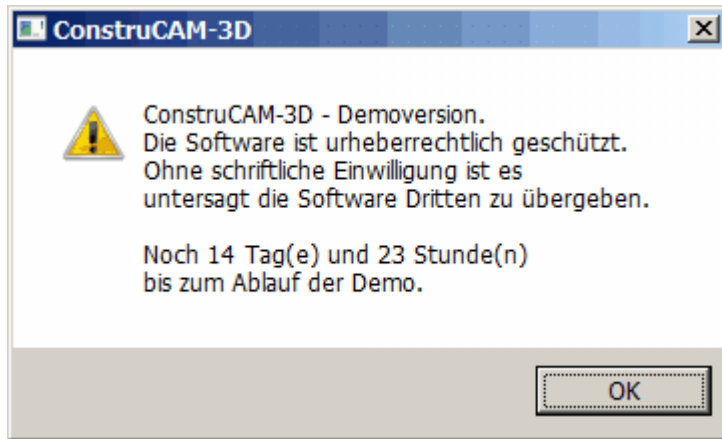

Instruction Demo Version: **The Demo-Version can be used as follows:**

1) After having started the program the demo version provides you with an installation number.

2) You send us the installation number including your full postal address and telephone number to our e-mail - address (info@cnc-step.com).

3) We will then send you the matching release code that you can enter when opening the program next time.

4) The software may inform you with the following note: Demo Version expired or – remaining time ...days....

The demo version works for 15 days after the starting the program first time. Data export is limited to 10,000 vectors/export.

We would like to inform you that software, release code and installation number must not be passed to third parties, copied in any way or published anywhere else except our web page. Contravention will be prosecuted.

Instruction Full Version :

Free version and purchase version can be used as follows:

After you have unpacked the available RAR file „ConstruCAM-3D Demo“ (see www.cnc-step.com – download menu / Service) into a newly created file (name e.g. ConstruCAM) you can copy a shortcut for the installation file ConstruCAM-3D.exe on your desktop and subsequently start the program from this location.

Do not open the program just now!!

Subsequently you rename the file CtIStrDat_.....ahs (that we sent you via e-mail) as **CtIStrDat.dll**

Save this file within the ConstruCAM-3D installation folder. You will be asked to either replace the old file or to cancel. **You replace (overwrite) the old file with the new one !**

After restarting the program you can release the software permanently on your computer by using your personal release code sent to you before.

Please note, that when using the free version an export data-exchange with the „Direct-Mill“ Button it is only possible, if the software WIN PCNC is installed on your computer. The Economy Version by G-Codes is necessary, because it is the only one that can read G-Codes. When using WIN PCNC Light version only HPGL files can be sent to WIN PCNC for milling and engraving.

We would like to inform you that software, release code and installation number must not be passed to third parties, copied in any way or published anywhere else except our web page. Contravention will be prosecuted.

If you do have any further queries, please do not hesitate to contact us.

Many thanks

Kind regards

Frank Hylewicz
